

Meeting Minute

Number: 9

In attendance: - David Amorim
- Francisca Silva
- Henrique Freitas

Date: 27/11/2024

Time: 11 h

Topics:

1 – Review all the issues

2 – Define how we would handle the sensors

1 – Review all the issues

Defined plan:

As we have another issue that we did not initially consider, adding a new sensor, we had to create more issues and assign them.

- Add page to add sensors
- Add endpoints for sensors(CRUD)

2 – Define how we would handle the sensors

Defined plan:

The microcontroller will generate temperature and humidity data, and we will generate the air quality and UV sensors manually.

However, we will also have virtual data generators.

Next Steps:

1. Implement all remaining issues
